Title: SYSTEM AND METHOD FOR OPTIMIZING PRINTING OF A PHASE
SHIFT MASK HAVING A PHASE SHIFT ERRORAMENDMENT AND RESPONSE UNDER 37 CFR § 1.111Commissioner for Patents
Washington, D.C. 20231REMARKS

Applicant has carefully reviewed and considered the Office Action mailed on September 13, 2001. No claims have been amended, canceled or added; as a result, claims 23-62 remain pending in this application.

Double Patenting Rejection

Claims 23, 32, 34, 36, and 39 were rejected under the judicially created doctrine of double patenting over claims 1, 3, 4, and 33 of U.S. Patent No. 6,096,457. Applicant notes the double patenting rejection, and will appropriately address this rejection upon the close of prosecution when all of the pending claims are otherwise found to be allowable.

§102 Rejection of the Claims

Claims 23-62 were rejected under 35 USC § 102(e) as being anticipated by Shiraishi (U.S. Patent No. 6,211,944). Applicant respectfully traverses this rejection. Applicant does not admit that the Shiraishi reference is prior art, and reserves the right to swear behind it at a later date. Nevertheless, Applicant respectfully submits that the claims are distinguishable over the Shiraishi reference at least for the reasons provided below.

The Office Action makes a broad rejection of claims 23 - 62, stating:

Re clms 23-62: Shiraishi discloses a system (Fig 1) comprising: an illuminator (1); a phase shifting mask (13a); and a restrictor (58 controls 17) adapted for adjusting illumination parameters to compensate for a phase shift error (Col 11, lines 33-45) in the phase shifting mask, a restrictor providing off-axis illumination is disclosed (Col 3 lines 3-12) and restrictor optimizes printing of the alternating phase shifting mask using empirical data (Col 12 line
